

**JETSTREAM AIRE**

## **Fresh Wind for your Laundry**

**JETSTREAM AIRE** was developed for cleaning industrial buildings from lint and dust, by a sub-ceiling installation. By regular use, it will prevent further contamination.

Also better circulation of air, at operational time during the day, can be achieved.

This will improve the air quality in the room, dramatically.

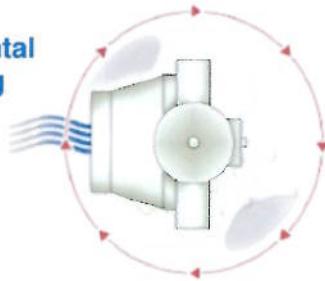

Through its patented oscillating rotating system, it will clean the complete area within a radius of 15m from lint and dust.

It also prevents the danger of fire risks.

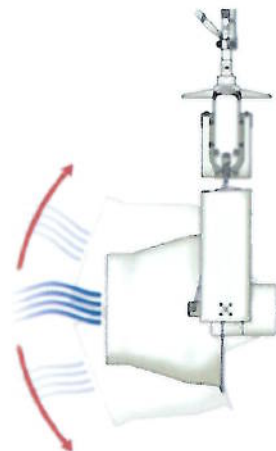

It should run for 1 hour, every night.

## **Solves laundry „LINT Problems“**

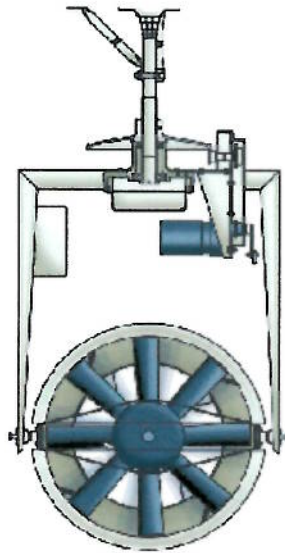

**360°  
horizontal  
rotating**

**160° vertical  
movement**

**Central Control Panel  
will be fitted for your  
demand, along  
CE regulations.**

**Technical Data:**

**Fan:**

**Voltage:** 380 V, 3P, 50Hz  
**Consumption:** 0,75 KW  
**Rpm:** 1725 1/min

**Gearbox:**

**Voltage:** 380 V, 3P, 50 Hz  
**Consumption:** 0,04 KW

**Loudness:** 88 dB

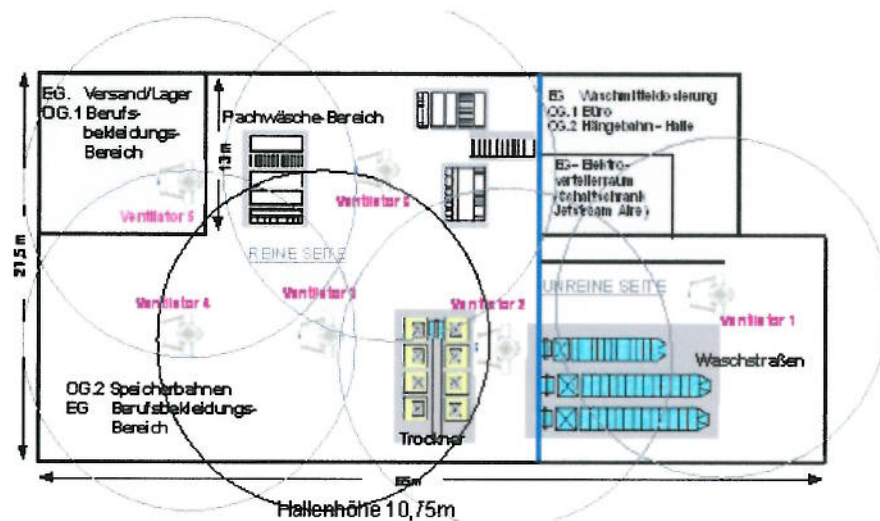

**Measurements:** 700 x 1400 x 620 mm

**Net weight:** 65 kg

**Horizontal movement:** 360°

**Vertical movement:** 160°

**Upon request we will support you for conception and installation**

**Above installation is already completed and can be visited in Switzerland, upon request.**
